

- Increase your productivity
- Improve your production quality
- Grow your profit margins

“The team at MIPAC is first class. Their attention to detail, thorough planning and process knowledge reduced the risks on a very complex project. MIPAC delivered a high quality result on schedule.”

Operational Excellence through superior Process Control

At MIPAC we give our customers peace of mind. We are results driven, customer focussed and people oriented. From concept to commissioning we provide solutions to measure, control and optimise major processing and production plants around the world.

MIPAC

MIPAC is a respected provider of Process Control, Instrumentation and Electrical Engineering solutions to major, complex processing and production plants. At MIPAC we strive to make your business competitive, by providing solutions tailored to your business needs.

With over 10 years experience and recognised worldwide as an expert in process control, MIPAC is the clear choice to help optimise your process and ultimately, your overall business operation.

MIPAC's plant optimisation solutions are designed to improve quality, reduce waste and increase yield – all of which will reflect in your bottom line. Overall MIPAC delivers solutions that ensure added value to your production processes.

Award-winning Experience

We specialise in industries defined by their continuous process control needs, both locally and internationally. Our proven track record is highlighted by our award winning projects, culminating in three prestigious PACE Zenith awards.

We understand the pressures and critical nature of the food and beverage industries and we are committed to delivering solutions to optimise your business.

Specialised and Dedicated Team of Experts

The MIPAC team comprises some of the industry's most talented and experienced process control engineers. We pride ourselves on attracting and keeping the best combination of experience and skills. Our people are flexible, reliable and provide our clients with continual support. Our team insists on making every project a success – and we continue to work with you to ensure maximum productivity during your plant's entire lifecycle.

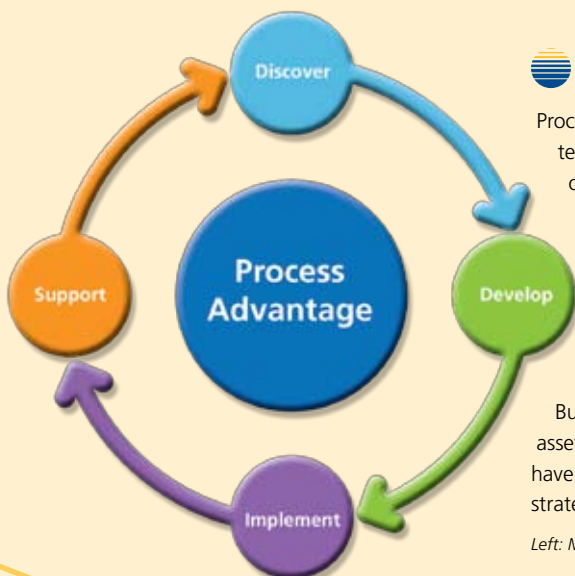

Expertise

With an impressive depth of knowledge and wealth of in-house experience, MIPAC is exceptionally well positioned to provide the services and technology to optimise throughput and production quality – minimising downtime and maximising profits.

By being vendor independent, MIPAC can objectively cover all facets of your operation from field instrumentation to turnkey control system selection and implementation; efficiency improvements with high-end advanced control tools and strategies; and ongoing process improvement and optimisation services. Whether it be large capital projects or ongoing operational improvements, MIPAC delivers award-winning results for our customers.

'MIPAC's expertise, specialised knowledge of systems and processes, the quality of the outcomes and the quality of the staff differentiate MIPAC from competitors. MIPAC delivers proven solutions, is responsive and less bureaucratic than other suppliers'

2008 MIPAC Customer Survey

MIPAC Process Advantage™

Process Advantage is the application of process knowledge and appropriate automatic techniques to stabilise and optimise industrial process. At MIPAC, we combine our experience with your process knowledge to collaboratively reduce variability and inefficiency, whilst improving consistency and increasing yield.

Process Advantage can be applied at any level in a control hierarchy from basic regulatory control to plant wide economic optimisation strategies.

→ Contact MIPAC, to learn how we can help you achieve higher returns from your assets – over the lifecycle of your plant.

Business success in a processing or production operation is directly related to how well assets are deployed and used to generate profits. MIPAC's Process Advantage ensures we have a good understanding of your plant operations and that we deliver the most appropriate strategies and tools to operate your plant assets as efficiently and profitably as possible.
